VRay 4.10.02 for SketchUp 2015/2016/2017/2018/2019/2020.According to an anonymous source within the company, Apple is “considering switching to Intel” when it comes to the Mac OS, the Chrome OS, iOS and more. The details on the mysterious development come from people within Apple who have been told to stop what they’re doing and could be highly reliable. 9to5Mac reports that the engineers have been warned off and to stop watching other sources of information. In other words, take it with a grain of salt. Still, the tip lines up with what Apple needs to do to move forward and is probably accurate. The developers working on iOS and macOS are using much the same software as the

---

Android people working on Chrome OS. The source, who is listed as “a third-party developer not working on OS X or iOS,” said that they’ve been told to stop watching all other Apple products and instead to become obsessed with the issues that affect Chrome OS and
